BLEOMYCIN THERAPY FOR WARTS

1. You will feel some stinging followed by itching which may last several hours.
2. Frequently, some bruising and a blood blister may appear after the injection.
3. It will be necessary for the doctor to lance the blister to relieve discomfort. A follow-up appointment will be scheduled 10 days after the injection.
4. Tenderness from your treatment should be relieved after 3-4 days. You can wear the pads given to you to relieve any pressure from the site.
5. Please soak affected area for 10 minutes in lukewarm water. Dry thoroughly and place band-aid on the area. To keep pressure from the area, apply another pad.
6. For tenderness use Tylenol or Advil after treatment Ice may be used to reduce tenderness as well if pain persists.
7. If you have any questions or problems, please feel free to call the office at, and speak to someone in the back office.
